Ensuring the right amount and type of racking, combined with the correct trucks is fundamental to smooth operations in a distribution center or a warehouse.

Our versatile range of storage and racking solutions gives you the flexibility to optimize the space in your warehouse and customize your racking to suit your individual needs.

The result is the ability to maximize your existing assets and ensure your trucks and your storage solutions are compatible for the best efficiency and productivity.

A One Stop Shop built around you

Here's a quick introduction to the different types of storage solution, however this list is not exhaustive. Whatever your requirements, we offer a one-stop-shop solution. From fork lift trucks and racking to training and intralogistics solutions, we can help with every element of your operation, just call us at **833-868-2500** to discuss your requirements today.

Pallet Racking - Vertical Storage Solutions

As the cost of building space continues to soar, the key solution is to elevate! Achieving your storage goals hinges on the right pallet rack system design.

Our engineers and install experts excel in meeting diverse storage needs to make every square foot count so that you can get the most out of your investment.

Triple your Storage and Inventory Volume with us today.

- On-site Storage Optimization
- In-house Licensed Contractor
- Expansion / Relocation Experts
- We Handle Your Entire Project
- Instant Trade-in Value Offers
- Call for Free Layout Consultation

VNA Pallet Racking

VNA pallet racking offers many benefits for warehouses and distribution centers, making it a popular choice for high-density storage needs.

Some key benefits include:

- **Increased Storage Capacity:** The compact design of VNA pallet racking allows for more pallets to be stored in a given space compared to traditional racking systems.
- **Improved Efficiency:** With guided man up or man down operation, VNA pallet racking enables faster and more accurate storage and retrieval of pallets. This can lead to increased productivity and reduced labor costs.
- **Better Space Utilization:** By using the height of the warehouse, VNA pallet racking maximizes space utilization without sacrificing accessibility to stored goods.
- **Flexibility:** VNA pallet racking can be customized to fit the specific needs and layout of a warehouse, making it a versatile storage solution.

Wide Aisle Pallet Racking

Our expansive aisle pallet racking system seamlessly houses palletized items, promoting efficient storage with the use of Reach and Counterbalance Forklift Trucks.

This system is customized to fit your specific requirements, considering variables like height, depth, and beam lengths to maximize space usage.

Our versatile racking system is also adaptable, offering a variety of accessories such as wire mesh or timber decking, pallet supports, and rack protection to cater to your unique needs.

Cantilever Racking

Cantilever racking is a specialized storage solution designed for storing long lengths or oversized products. It is commonly used in warehouses, manufacturing facilities, and distribution centers to store items such as lumber, pipes, metal sheets, and furniture.

The design of cantilever racking takes into consideration the specific requirements of each customer, including the desired height, length, arm pitch, and capacity. This ensures that the racking system is optimized for maximum efficiency and storage space utilization.

With its unique design and customizable features, cantilever racking provides a practical and efficient solution for storing large and heavy items in an organized manner.

So, if you have large or awkwardly shaped products that need to be stored, consider using cantilever racking for a more organized and space-saving solution.

Drive In/Through Pallet Racking

When the need for maximum storage capacity is paramount, Drive in/Through Pallet Racking presents an economical solution.

However, due to its design, this type of racking system has limited pallet accessibility and slower operation, thus requiring a suitable SKU profile.

This racking type is particularly favored in cold storage or freezer applications thanks to its space optimization capabilities.

Racking Inspection - You're in Safe Hands.

What is a racking inspection?

Racking inspections aim to identify and fix any damage, defects, or hazards that could pose a risk to workers, goods, or the racking system. Racking inspections are required by law and should be carried out at least once a year by a qualified expert.

The Health and Safety Executive (HSE) recommends having a racking inspection by a SEMA approved racking inspector (a SARI) at least once a year.

Your racking should be:

- In good condition
- Can be used safely
- Installed correctly

Why do I need an inspection?

Regular racking inspections not only ensure you stay legally compliant, but also ensure any safety risks are picked up instantly. Identifying (and rectifying) damage as it happens means you reduce the risk of racking collapsing, damage to your property, as well as serious injury to your staff.

How can Total Warehouse help?

Our intralogistics team are fully trained to inspect your racking systems. Once the inspection is complete, they will provide a full report, giving you peace of mind that your storage system is safe and secure.

**No employee should work in fear of their safety –
Book your inspection today with one of our experts at 888-868-2500.**

A One-Stop Shop Solution

PALLET RACKING

Optimize your storage with the right pallet rack system design.

HIGH DENSITY STORAGE

Customizable storage systems to optimize your capacity.

CANTILEVER RACKING

Heavy duty racking built to your exact needs.

BOLTLESS SHELVING

Versatile shelving solutions that meet every storage requirement.

ENGINEERING

Enhance your workflow with our assessment, design, and development.

INSTALLATION

Install your rack with our licensed and certified professionals.

MATERIAL HANDLING EQUIPMENT

Material handling products for end to end warehouse solutions.

NEW AND USED PALLET RACKING

Pallet racking options available for your preferences.
