Material Handling Solutions

## MODULAR FLEET MANAGEMENT

Our fleet management solution consists of various hardware and software modules. Linde Connect offers you transparent data on usage and vehicle deployment, as well as an overview of planned service intervals and upcoming driver training. For you that means improved on-site traffic safety, higher vehicle availability and increased cost-effectiveness.

### Coordination

Overview of driver data and vehicle availability and distribution

### Service

Service and maintenance schedules of all vehicles at a glance

### Logbook

List of all recorded events for each vehicle

### Usage

Overview of usage and utilization of all vehicles

The fleet manager knows at all times which driver is controlling which forklift truck and how long it has been in use. They use software to determine who is allowed to drive in which areas and at what speed. With just one click, they can see the capacity utilization and energy consumption of the entire fleet and when the next service is due. These are just a few examples of the functions of the Linde Connect fleet management system. The hardware and software of the Linde Connect family networks the forklifts and collects and analyses the truck data. This increases the availability, safety, and productivity of the fleet.

## COMPREHENSIVE DATA ANALYSIS

Data collected is compressed into reports in the Connect Desk software. Fleet managers, drivers or service technicians thus receive important information on the status and use of the trucks, allowing them to be best placed to plan further operations. The individual Linde Connect modules each offer a number of specific functions for fleet management.

Simple vehicle and driver management

Effective access control

Clear analysis of fleet usage

Predictive maintenance

More safety in traffic on premises

Visible reduction of violent damage

connect:ac  
access control

The electronic key

connect:ac  
pre-operational check

Pre-shift check via app

connect:dt  
crash detection

Electronic damage monitor

connect:dt  
operating hours

Digital logbook

We sit down with you and put together just the right telematic components to suit your needs. We help you choose and install everything from the necessary infrastructure all the way up to the finalized connect solution. If questions arise during ongoing operations, support is provided by experts from our Total Warehouse Advanced Solutions team.
