

TYPES OF WIRE DECKS

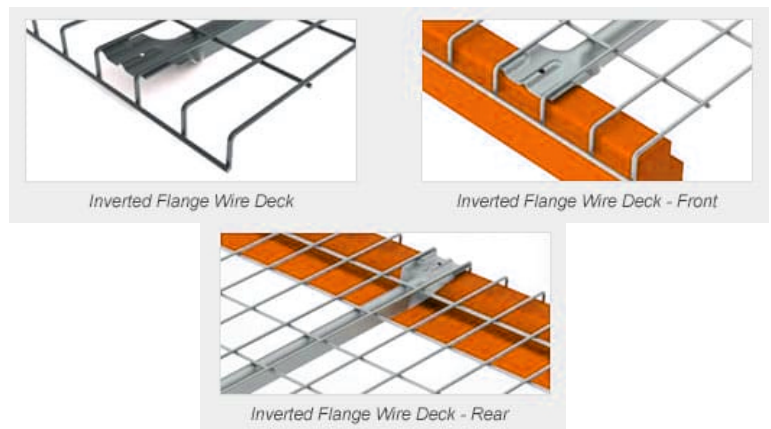

Standard Waterfall

Standard wire decks with a waterfall are made to sit in the steps of pallet rack beams. The support channels of this decking rest on the steps and the waterfall part wraps around the top of the beam.

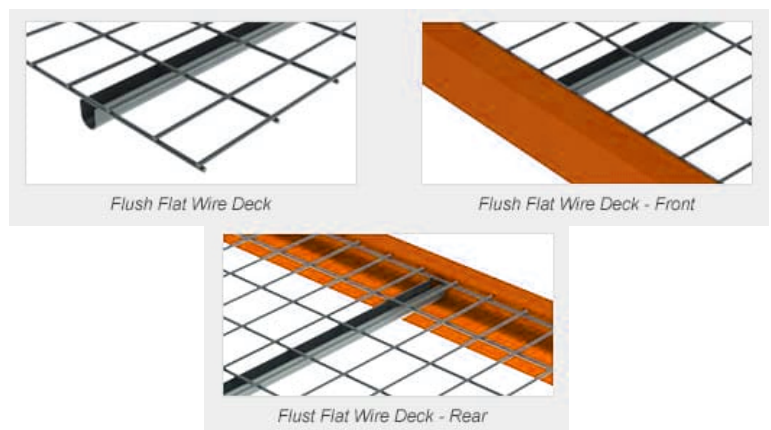

Inverted Flange

Inverted flange wire decking is a very commonly stocked style. It's useful because the flange at the end of the support channels allow these wire decks to fit on step or box style pallet rack beams.

Flush Flat

The surface of the decks rest flush with the tops of the rack beams. Flush flat decks have no waterfall and are well-suited for your storage facility if a nice clean look is needed.
